Intended Learning Outcome	Criteria	Level		
		Meets expectations	**Approaching expectations**	**Below expectations**
As a team, design and develop a small application responding to provided functional specifications	**Code**	Use official IDE to initialize project. Compile and deploy on device. Use Kotlin language. App is 100% complete according to specifications. Code is clean and commented when necessary. App structure follow an appropriate form of architecture. Choices are defendable and can be explained.	Official IDE is used to initialize project using appropriate template. Compile and deploy on device. Use Kotlin language. Developed functionalities follow specifications. App is more than 75% complete.	
	UI	All required screens display correctly on different devices. UI is created using state of the art components. Follow graphical specifications. Use dedicated UI architecture (MVVM, Compose+ MVC, etc.). Use appropriate components for complex and/or custom graphical components. Choices are defendable and can be explained.	Displays correctly in a target device.	Displays correctly in WYSIWYG editor.
	Design	UX allows to experience all features and functionalities accurately. UX does not require help or provides help content.	Some functional specifications may be inaccurate or missing.	
	Team work	Project management information is structured and visible through time (tasks, distribution among team members, planning and dates, etc.). Relations between specifications entities and technical entitied are explicit.	Project is split in identifiable and distinct entities.
